Simplicity

- Simple to install: of all the products available on the market AQUA PLOUF is easiest to install. Simple and fast it can be installed in less than one hour.
- Simple to use: AQUA PLOUF is self calibrating and requires no specific programming. In standby mode AQUA PLOUF resets automatically after 15 minutes if there is nobody in the pool. Despite this, regular checks should be carried out through-out its service life to ensure that it is working correctly.

For your safety

- It is preferable to call on a professional for the installation and maintenance of the alarm system.
- This type of protective system may be used if the location of the pool with respect to the home or place of residence would allow a complete intervention, including rescue from the pool, within 3 minutes.
- Some counter-swim systems prevent resetting of the immersion detection system.
- Some dive-type cleaning robots are not compatible with immersion detection systems.
- Waterfalls and water jets can interfere with AQUAPLOUF's operation.
- Depending on the location of the home or place of residence with respect to the pool, it may be necessary to move the safety, alarm and anomaly signals such that they may be heard from within the home or place of residence. This should be checked during installation.

Reliability

The technology used to design AQUA PLOUF has been tried and tested by over 2,000 installed and monitored units. Its exclusively patented operating principle allows the highly reliable detection of human bodies falling into the pool. AQUA PLOUF complies with the safety standard NF P 90-307 / A1 and all tests were carried out by a single laboratory. Furthermore, it is manufactured in an ISO 9001 certified factory.

Aesthetic

Forget choosing between pool safety and the aesthetics of pool surroundings. AQUAPLOUF's discretion is equalled only by its reliability. With its small size, harmonious shape and its sandy beige colour, the detection unit blends seamlessly and discreetly into the universe created around the pool.

Safety for all

The AQUA PLOUF alarm is suitable for all private, in-ground pools that have not been fenced in. This accounts for the large majority of pools on the market. Furthermore, its technology implies a direct line to each point of the pool within a maximum radius of 7m. However, it does not work with pools featuring a submerged deck with a gentle slope of less than 30%, or with overflow pools.

AQUAPLOUF's Components

- 1 UV treated synthetic resin housing fitted with a detection sensor.
- 1 electronic assembly inside a waterproof resin housing.
- Two 115 dB waterproof sirens.
- 1 lock with 2 keys allowing the system to be switched to standby mode and a remote control.
- 1 power supply comprising 6 LR-20 alkaline batteries (supplied), service life 1 year.
- 1 remote control.
- Remote siren (optional).

Serenity

In order to optimise pool safety, PROCOPI decided to render AQUA PLOUF even more robust. Hence, the siren, along with the other key components of the detection unit have been doubled up to guarantee that the alarm will work correctly. For increased peace of mind, a remote siren may be installed in the home or at any other location within a 30m radius of the detection unit.

Legal notice

This alarm system is no substitute for common sense or individual responsibility. Nor is it designed to substitute the vigilance of parents and/or responsible adults which remains the key factor in ensuring the safety of children under five. This alarm is a protective device that signals danger (or a risk of danger). Rapid intervention, within 3 minutes, is mandatory if the alarm is tripped. Any user shutting down the system should be aware that human supervision will then be necessary. The parent and/or responsible adult should exercise the utmost vigilance during the time taken for the alarm to reset after the last person leaves the pool. Switch off the counter-swim after bathing to allow the alarm system to reset.
