CARING FOR THE ENVIRONMENT

Déchlor

CARING FOR THE ENVIRONMENT

FRESH WATER IS A RARE AND PRECIOUS RESOURCE THAT SHOULD NEVER BE WASTED. EVER ATTENTIVE TO THE IMPACT A POOL CAN HAVE ON THE ENVIRONMENT, PROCOPI DEVELOPED **DÉCHLOR**, A WATER DECHLORINATOR.

Déchlor is simply mounted on the waste pipe coming from the multi-port valve. During a back wash, or while emptying the pool, the chlorinated water is mixed with a neutralizer that removes chlorine. The clean water can then be safely sent to waste or stored to water the garden, wash your car, etc.

DECHLORINATION, THE ACT OF A TRUE ECOCITIZEN

Every day, we make small gestures to protect our planet. Although we realize their limitations, they reinforce and reaffirm our convictions.

By using **Déchlor**, you can make a real difference to the preservation of our environment and the defence of future generations.

Déchlor is a tool of the true ecocitizen.

A SIMPLE SYSTEM, EFFICIENT AND EASY TO INSTALL

Déchlor comprises a storage tank, a pump, a sensor, a connection kit and a neutralizing agent, **Neutral**. Once **Neutral** is injected into the system, dechlorination is immediate. **Déchlor** can be easily mounted on any type of filter.

WASTE WATER THAT RESPECTS THE ENVIRONMENT

Chlorinated waste water from swimming pools interferes with the correct operation of water treatment plants. Consequences: pollution and increased water rates. With **Déchlor**, you release neutral water that is not harmful to water treatment stations or the environment.

A LENGTH AHEAD OF REGULATIONS

With **Déchlor**, you stay a length ahead.

In fact, in the near future, it will be mandatory to dechlorinate waste water before it is released into the environment.

Label Bleu **Neutral**

This product instantly neutralises free chlorine in the water. **1 litre of Neutral will treat 1 m³ of waste water.**

DÉCHLOR, HOW DOES IT WORK?

Easy to install on any filter, **Déchlor** is mounted on the waste pipe coming from the multiport valve. During a back wash, the chlorinated water is mixed with a neutralizing agent, **Neutral**, this removes chlorine and brings the water's pH back to neutral. In just a few seconds, the chlorine is gone. All that remains is pure water and traces of sulphate salts, completely harmless compounds commonly found in animal feeds and most popular mineral waters. Your waste water is dechlorinated and the environmental impact of your pool is significantly reduced.
